NATIONAL CENTER ON ELDER ABUSE

Abuse of Adults Aged 60+ 2004 Survey of Adult Protective Services

The 2004 *Survey of State Adult Protective Services* (APS), the most rigorous national study of state-level APS data conducted to date, offers important new insights into the troubling elder abuse problem.

The findings show a 19.7 percent increase in the combined total of reports of elder and vulnerable adult abuse and neglect and a 15.6 percent increase in substantiated cases in the four years since the last survey was conducted in 2000.

The study, which analyzed the latest data from the states, found that overall, in 2003, APS agencies received 565,747 reports of suspected elder and vulnerable adult abuse, as compared with 482,913 reports four years ago.

The 2004 Survey collected 2003 fiscal year data from all 50 states, Guam, and the District of Columbia. Most important, at least two-thirds of the states were able to separate out reports of elder abuse from vulnerable adult abuse.

Among those 32 states responding, there were 253,426 incidents involving elder abuse, ranging from a low of 85 in Guam to a high of 66,805 in California. This represents 8.3 reports of abuse for every 1,000 older Americans.

Other Key Highlights

- In 2003, 192,243 cases of alleged elder abuse were investigated by the APS in 29 states.
- In 24 of the states, nearly half (46.7%) of the investigations were substantiated, ranging from a low of 7.2% in Arkansas to a high of 72.4% in Texas.
- In the overwhelming majority of cases (89.3%) the alleged abuse was reported to have occurred in a domestic setting.

About the Study

The 2004 *Survey of State Adult Protective Services* builds on earlier efforts to capture a national picture of elder abuse, as drawn from state APS data.

Data collection efforts, refined with iterations, have been conducted since 1986.

Because of differences in definitions and varying data collection capabilities among the states, comparisons with earlier data have been problematic at best.

The 2004 Survey presents a follow up to the National Center on Elder Abuse's 2000 *Survey of State Adult Protective Services*. It provides data, where comparable, to identify trends.

Who are the victims?

- Older women, according to the survey, are far more likely than men to suffer from abuse or neglect. In 2003, two out of every three (65.7%) elder abuse victims were women (15 states reporting).
- In 20 of the states, more than two in five victims (42.8%) were age 80 or older.
- The majority (77.1%) of victims, according to reports from 13 states, were Caucasian.

Types of abuse and perpetrators

In 2003, slightly more than half (52.7%) of the alleged perpetrators of elder abuse or neglect were female (11 states reporting). Three out of every four alleged offenders (75.1%) were under 60 (7 states reporting).

Most alleged perpetrators in 2003 were adult children (32.6%) or other family members (21.5%). Spouses/intimate partners accounted for 11.3% of the total (11 states responding).

Twenty-one of the states (40.4%) maintain an abuse registry or database of alleged perpetrators, while 31 (59.6%) do not.

As reported by 19 states, types of maltreatment substantiated included:

- Self neglect (37.2%)
- Caregiver neglect (20.4%)
- Financial exploitation (14.7%)
- Emotional/psychological/verbal abuse (14.8%)
- Physical abuse (10.7%)
- Sexual abuse (1%)
- Other (1.2%)

Reporting elder abuse

The three most common sources of reports of elder abuse and neglect allegations were family members (17%), social services workers (10.6%), and friends and neighbors (8%), according to APS data from 11 states.

Recommendations

- Accurate and uniform data must be continuously collected at state and national levels so that elder abuse trends can be tracked and studied. A concerted effort is needed to create uniform definitions and measures for reporting. As a baseline, all states need to be able to provide the information requested by the 2004 Survey .
- States should collect detailed and age- and gender-specific information on race and ethnicity of elder abuse victims and the alleged perpetrators. Very little is known about the racial and ethnic composition of victims.
- Training in the identification and reporting of abuse should expand to key groups such as utility and postal workers, etc., who are not traditionally targeted in prevention and intervention efforts.
- It is crucial for states to collect outcome data on clients served. This information will be extremely helpful in determining efficacy of APS intervention.
- With the increasing number of abuse reports, investigations, and substantiations, there is a need to increase education, and intervention efforts at all levels, local to national.
- States should collect as much data as possible, not only about elder abuse victims, but also about the perpetrators. Little information is available on perpetrators and what happens to them as a result of APS intervention. Data collection in this area will be critical for prevention, intervention, and advocacy.
- A national study of APS data specifically related to the abuse of adults 60+ should be conducted no less than every four years to ensure methodological comparability between surveys.

.....

The 2004 Survey was conducted by the National Center on Elder Abuse, with oversight by the National Committee for the Prevention of Elder Abuse and the National Adult Protective Services Association. Special appreciation to lead investigator and study author Pamela B. Teaster, PhD of the Graduate Center for Gerontology, College of Public Health, University of Kentucky and President Elect, National Committee for the Prevention of Elder Abuse; and co-lead investigator Joanne Marlatt Otto, Executive Director, National Adult Protective Services Association. Other researchers participating in the study include Tyler A. Dugar, BA, Marta S. Mendiondo, PhD, Erin L. Abner, MA, and Kara Cecil, MPH of the Graduate Center for Gerontology, College of Public Health, University of Kentucky.

The National Center on Elder Abuse (NCEA)

serves as a national resource for elder rights advocates, adult protective services, law enforcement, legal professionals, medical and mental health providers, public policy leaders, educators, researchers, and concerned citizens. It is the mission of NCEA to promote understanding, knowledge sharing, and action on elder abuse, neglect, and exploitation.

NCEA is supported by grant no. 90-AM-2792 from the U.S. Administration on Aging, Department of Health and Human Services.
